Proportion of respondents
who attribute "very great
prestige" to the
following professions:

Source: The Harris Poll, July 2008

This image is a bad example for data visualization because it uses 3d pie charts as graphs and as a result we can't see the exact proportions. If we didn't know the number of the people from the each profession we couldn't read anything from this image. To make it better and easier to read we can use a single 2d pie chart that has the professions numbers. For the information they want to give us we don't even need to use pie charts. We can easily use a bar plot; x-axis containing professions and y-axis containing the numbers. I found this graph from [<https://5cc2b83c.delivery.rocketcdn.me/app/uploads/bad-data-visualisation-3d-pie-chart.png>]
